1 Introduction

As a Student Digital Ambassador at VIT Bhopal, I have developed this portfolio to demonstrate my proficiency in navigating the modern digital landscape. Digital literacy is a core competency for any Engineer, particularly in the field of Cloud Computing and Automation. This project cov- ers five essential modules: creating visual educational resources, building a professional online identity, mastering collaboration tools, practicing professional communication, and analyzing cyber threats. Each task in this report reflects a blend of technical skill and responsible digital citizenship.

2 Task 1: Digital Literacy Awareness Infographic

2.1 Overview

For this task, I designed a one-page visual resource using Canva to educate my peers on essen- tial digital skills. The infographic focuses on three core pillars: Online Safety, Essential Digital Tools, and Email Etiquette.

2.2 Reflection

For the first task of my Digital Literacy portfolio, I designed a one-page infographic aimed at educating my peers on the essential components of navigating the modern digital landscape. I utilized Canva, a browser-based graphic design tool, to create a visually engaging and easy-to-read resource. My design specifically focuses on three core pillars of digital literacy: Safe Internet Practices, Useful Digital Tools for Students, and Professional Email Etiquette.

One thing I found particularly interesting while making this infographic was the challenge of ”visual hierarchy”—learning how to arrange information so that the most critical safety tips catch the reader’s eye first. Balancing aesthetic appeal with concise, actionable information was a valuable exercise in digital communication.

3 Task 2: Student Digital Portfolio

3.1 Overview

I established a professional footprint on three major platforms: GitHub, LinkedIn, and Kaggle. These platforms allow me to showcase my academic progress and technical projects to the global community.

3.2 Reflection

In completing Task 2, I established a foundational professional presence across three key digital platforms: GitHub, LinkedIn, and Kaggle. As a first-year student in B.Tech CSE (Cloud Comput- ing and Automation), I recognize that a professional digital footprint is no longer optional but expected by the academic and professional community.

I utilized GitHub to create a specialized profile README that highlights my current academic focus at VIT Bhopal. On LinkedIn, I updated my education details to begin connecting with industry peers and internship coordinators. I also initialized a Kaggle account, which I intend to use for practicing data-driven automation scripts. Over the next four years, I plan to use these platforms as a living portfolio to showcase my projects, certifications, and technical growth. This task taught me the importance of maintaining a professional and minimal online presence while ensuring my skills are visible to the right audiences.

4 Task 3: Coding & Collaboration Platforms

4.1 Overview

This task involved technical skill-building through HackerRank and community engagement via a Digital Literacy Awareness Quiz created on Google Forms.

4.2 Reflection

In Task 3, I practiced essential technical and collaborative skills required for a Student Digital Ambassador. I completed the Python Introduction challenge on HackerRank to strengthen my logic and familiarity with competitive coding environments, which is vital for my Cloud Comput- ing curriculum. Additionally, I developed a Digital Literacy Awareness Quiz using Google Forms. This exercise demonstrated how cloud-based collaboration tools can be used to collect data and educate a community efficiently. Mastering these platforms is crucial for my academic journey as they allow for seamless project management and technical problem-solving.

5 Task 4: Professional Email & Etiquette

5.1 Overview

This module focused on professional communication protocols, including drafting formal aca- demic and professional emails and defining social media boundaries.

5.2 Reflection

I learned that digital communication is a critical skill for a Student Digital Ambassador. I drafted two professional emails, focusing on maintaining a respectful tone and clear structure, which are essential for academic and career success. I also created a social media checklist to promote responsible online behavior. One situation where poor digital communication caused a real problem was a hypothetical scenario where a student used an unprofessional email address and informal language to contact a recruiter. This resulted in their application being ignored despite having high technical skills. This highlighted that 'how' we communicate is often just as important as 'what' we are communicating.

6 Task 5: Cybercrime Awareness & Prevention

6.1 Overview

I conducted a case study on UPI/Online Payment fraud, a prevalent threat in the modern Indian financial ecosystem, and compiled a list of preventative measures.

6.2 Reflection

Researching UPI fraud for Task 5 was eye-opening. What surprised me most was how fraud- sters exploit a simple misunderstanding of technology—specifically the fact that a PIN is never needed to receive money. This psychological manipulation is often more effective than techni- cal hacking. As a result of this research, I will personally change my habit of scanning QR codes sent by strangers and will now double-check the 'Request' vs. 'Pay' labels on my UPI app every time. This task reinforced my role as a Digital Ambassador, as sharing these simple tips can prevent significant financial loss for my peers.

7 Conclusion

The completion of this portfolio marks a significant step in my development as a Student Digital Ambassador. Through these five tasks, I have not only improved my technical proficiency in cloud tools and coding platforms but also deepened my understanding of the ethical and safety- related responsibilities of a digital citizen. These skills are fundamental to my career in Cloud Computing and will allow me to contribute meaningfully to the digital landscape at VIT Bhopal and beyond.
